Sammendrag

Det er nødvendig med et økt søkelys på bruker- og pårørendemedvirkning for å sikre gode tjenester til personer med psykisk helse- og rusutfordringer. Formålet med denne rapporten var å kartlegge hva som finnes av kvalitativ forskning om brukermedvirkning, inkludert pårørendemedvirkning, på ulike nivåer innen psykisk helse- og rusfeltet, og avdekke områder der vi trenger mer forskning. Problemstillingen har vært hva fremmer godt samarbeid om brukermedvirkning innen psykisk helse og rusfeltet, ifølge kvalitativ forskning fra Norden og Sápmi i perioden 2012- 2022.

I denne sammenhengen har vi valgt å fremstille kunnskapsoppsummeringen i form av en kortfattet rapport med vedlegg.

Rapporten gir en oversikt over arbeidet med litteratursøk og litteraturgjennomgang, samt presentasjon av hovedfunn. Funnene viser noen viktige strømninger innen fagfeltet psykisk helse og rus i nordisk og samisk kontekst de siste ti årene, innenfor kvalitativ forskning.

Resultatene av litteraturgjennomgangen er omfattende. Vi har derfor valgt å presentere hovedfunn kortfattet i rapporten, med henvisninger til tilhørende vedlegg for de som ønsker mer inngående innsikt. Utvalget av artikler som refereres til, er eksempler på fremtredende tematikk fra vår analyse. De refererte artiklene er valgt ut på bakgrunn av bredde og variasjon. På grunn av prosjektets begrensede tidsperspektiv[1], har det vært nødvendig å avgrense rapportens omfang.

Vedleggene i denne rapporten er systematiske oversikter som sorterer og synliggjør den tilgjengelige forskningen om en bred problemstilling. Vedleggene gir utfyllende informasjon, og kan virke som en oversikt over litteraturen funnet på temaet. Det ble gjort søk i seks forskningsdatabaser. Vi vurderte treffene og sorterte, kodet og analyserte studier som møtte inklusjonskriteriene i henhold til et forhåndsdefinert rammeverk (se inklusjonskriterier). Vi inkluderte 508 artikler.

Våre hovedfunn:

- Vi identifiserte en betydelig mengde artikler om brukermedvirkning innen psykisk helse- og rusfeltet. Hovedandelen handlet om psykisk helse, færre handlet om rus
- Hovedvekten av artiklene omhandlet brukermedvirkning på individnivå og tjenestenivå.
- Vi identifiserte få artikler på systemnivå
- Hovedandelen av artiklene omhandlet voksne brukere (over 18 år)
- Vi identifiserte få artikler om barn og unge
- Vi identifiserte få artikler om eldre
- Mye av forskningen i Norge og Norden handlet om recovery, og recovery- orienterte tjenester. Disse tjenestene ses i tilknytning til arbeid, meningsfulle aktiviteter, venner og familie, selvbestemmelse, tilhørighet, håp og identitet
- Mye av forskningen i Sápmi omhandlet myndiggjøring, og praksis viser en tydelig vektlegging av helse- og velferdskompetanse i et helhetlig og kulturtilpasset perspektiv
- Mye forskning satt søkelys på erfaring fra bruker-, pårørende- og tjenesteperspektiv
- Forskningen viste at det er en økende praksis av mer individuelt tilpassede tjenester

Key messages

An increased focus on user participation is necessary to ensure good services for people with mental health and substance abuse challenges. The purpose of this report was to find available qualitative research on user participation (including next-of-kin participation) at various levels within the mental health and substance abuse field, and to uncover areas where we need more research. The topic has been what promotes good collaboration on user participation in the field of mental health and substance abuse, according to qualitative research from the Nordic and Sami context in the period 2012-2022.

In this context, we have chosen to present the knowledge summary in the form of a concise report with interactive appendices.

The report provides an overview of the work process, as well as some key findings. The findings show some important currents in the field of mental health and substance abuse in a Nordic and Sami context over the last ten years, with a spotlight on qualitative research.

The results from the literature searches are extensive. We have chosen to present the main findings briefly in the report, with references to the associated appendices for those who want more in-depth insight. The selection of articles referred to are examples of prominent themes from the analysis. The referenced articles have been selected because of breadth and variety. Due to the project's limited time perspective, it has been necessary to limit the scope of the report.

The interactive appendices in this report are a type of systematic overview that sorts and highlights the available research on a broad issue. These appendices provide supplementary information and can act as an overview of the literature found on the topic. A search was made in six research databases. We coded studies that met the inclusion criteria according to a predefined framework (see inclusion criteria). We included 508 abstracts.

Our main findings:

- We identified a significant number of articles on user participation in the field of mental health and substance abuse. The main proportion was about mental health, fewer were about substance abuse
- Most of the articles dealt with user participation at individual level and service level.
- We identified few articles at the system level
- Most of the articles dealt with adult users (over 18 years of age)
- We identified few articles about children and young people
- We identified few articles about the elderly
- Much of the research in Norway and the Nordics was about recovery, and recovery-oriented services. These services are seen in relation to work, meaningful activities, friends and family, self-determination, belonging, hope and identity
- Much of the research in Sápmi dealt with empowerment, and practice shows a clear emphasis on health and welfare competence in a holistic and culturally adapted perspective
- Much research focused on experience from the perspective of users, relatives, and services
- The research showed that there is an increasing practice of more individually adapted services

Innledning

Beskrivelse av oppdraget

Helsedirektoratet har bruker- og pårørendemedvirkning i helse- og omsorgstjenesten som et prioritert satsningsområde. Et tiltak for å oppnå dette er å utvikle nasjonale anbefalinger for bruker- og pårørendemedvirkning innen psykisk helse og rus. I arbeidet med anbefalingene, er kunnskapsinnhenting en sentral del av prosessen. Professor Rita Sørly, Institutt for barnevern og sosialt arbeid, og førsteamanuensis Vår Mathisen, Institutt for helse- og omsorgsfag, UiT Norges Arktiske Universitet, har på oppdrag fra Helsedirektoratet gjennomført en kunnskapsinnhenting av kvalitativ forskning om brukermedvirkning innen psykisk helse og rus. Hensikten med et litteratursøk som omhandler kvalitativ forskningslitteratur om brukermedvirkning innen psykisk helse og rus, er altså knyttet til å utarbeidelsen av faglige anbefalinger.

Bakgrunnen for dette søket var ønsket om å tilføre ytterligere kompetanse til feltet gjennom en systematisk litteraturgjennomgang på kvalitativ forskningslitteratur som omhandler brukermedvirkning innen psykisk helse og rus i (1) norsk kontekst, (2) samisk kontekst, og (3) en nordisk kontekst. Denne typen kartlegging egner seg godt for å identifisere aktuell forskning som ellers ikke fanges opp i søk i kvantitative studier, med systematiske oversikter som besvarer spørsmål om effekt eller ser på randomiserte kontrollerte studier.

FHI gjennomførte i 2021 en systematisk kunnskapsoppsummering på oppdrag fra Helsedirektoratet. Oppsummeringen inneholdt systematiske oversikter med kvantitativ forskning, og er presentert som et forskningskart med søkelys på *effekten* av brukermedvirkning (Langøien et al., 2021).

I denne omgangen, med søk innen kvalitativ forskning, var formålet å kunne bidra til en bredere kunnskap om hva som kan *fremme godt samarbeid* om brukermedvirkning innen psykisk helse og rusfeltet. I likhet med FHIs systematiske kunnskapsoppsummering fra 2021, vil denne kunnskapsoppsummeringen kunne bidra til å danne et grunnlag for kunnskapsbaserte prioriteringer for videre forskning på feltet.

Brukermedvirkning

Brukermedvirkning er et porøst begrep, som defineres på mange ulike måter. I denne sammenhengen handler det hovedsakelig om at brukere av helse- og omsorgstjenesten skal ha innflytelse på innretningen av tjenestetilbudet, og på denne måten bidra til bedre helse- og omsorgstjenester. Brukermedvirkning er en forutsetning for å arbeide kunnskapsbasert.

Brukermedvirkning foregår på tre ulike nivåer:

- Brukermedvirkning på individnivå handler om den enkeltes rettigheter og muligheter til å ha innflytelse på behandlingen de får i helse- og omsorgstjenesten. Brukermedvirkning på individnivå er lovfestet i [pasient- og brukerrettighetsloven \(lovdata.no\)](https://lovdata.no/dokument/LOV/1998-06-18/lov-98-13) kapittel 3.
- Brukermedvirkning på tjenestenivå innebærer at brukerrepresentanter samarbeider med fagpersoner i helsetjenestene, for eksempel på et sykehus.
- Brukermedvirkning på systemnivå innebærer at brukergrupper og brukerorganisasjoner involveres i planlegging av tiltak og tjenester, for eksempel gjennom samarbeid med Statsforvaltere, regionale kompetansesentre eller direktorater ([Brukermedvirkning - Helsedirektoratet](#))

I tillegg til disse tre nivåene, vet vi at brukermedvirkning også har en sentral rolle innen forskning på feltet rus- og psykisk helsearbeid (Klausen, 2016).

Lovfestet rettighet

Brukermedvirkning er en grunnleggende og lovfestet rettighet. Brukere har rett til å medvirke, og tjenesten har plikt til å involvere brukere i undersøkelser, behandling og valg av tjenestetilbud. Fag, bruker og pårørende-kompetanse skal likestilles når helsetjenester utformes, og det er et mål at den enkelte bruker skal få et godt, tilpasset tilbud.

Samarbeid om medvirkning

Helsedirektoratet har som mål å styrke befolkningens helse, og utvikle gode helsetjenester. For å oppnå dette må vi ta utgangspunkt i forståelsen og behovene til brukerne og deres pårørende. Alle har rett til å medvirke i sitt eget forløp, og det er et behov for en felles forståelse av hva bruker- og pårørendemedvirkning er, og skal være. For å kunne fremme en felles forståelse er det viktig å anerkjenne bruker – og pårørendekompetanse som like viktig som fagkompetanse. Vi må samarbeide om gode helsetjenester, brukere, pårørende og fagfolk. For at vi skal kunne omtale noe som medvirkning, må de personene som har erfaringer med aktuelle helsetjenester, være med fra første stund. Hvis ikke objektiviseres de, samt at den kunnskapen de har, tilsidesettes. Det er derfor avgjørende at vi gir mening, innhold og praksis til brukermedvirkning innenfor psykisk helse og rusfeltet. Forventningene til brukermedvirkning og erfaringskompetanse er mange, og forskjellige. Vi må skape realistiske forventninger til hverandre i et samarbeid om medvirkning; hva er det vi kan enes om som viktig, og hvordan skal vi få det til?

Hvorfor er det viktig å utføre denne kunnskapsoppsummeringen?

Arbeidet med å utarbeide nasjonale anbefalinger innen bruker- og pårørendemedvirkning i psykisk helse- og rusfeltet er et sentralt satsningsområde i Helsedirektoratet. Det er i den forbindelsen viktig å innhente erfaringskunnskap, fagkunnskap og forskningskunnskap på området. Vi trenger å kjenne til tilgjengelig forskning på feltet som kan gi et godt grunnlag for prioriteringer innen feltet fremover. Innhenting av kvalitativ forskning er med på å danne et av kunnskapsgrunnlagene for helsedirektoratets nasjonale anbefalinger på området.

Mål og problemstilling

Hensikten med denne rapporten og de tilhørende vedleggene, er å få en oversikt over kvalitativ forskning som sier noe om hva som kan fremme godt samarbeid om brukermedvirkning innen psykisk helse og rusfeltet. Vi ønsker også å få kunnskap om hva vi trenger mer forskning om, og avdekke eventuelle kunnskapshull. Rapporten og de tilhørende vedleggene omfatter kvalitativ forskning om brukermedvirkning på individnivå, tjeneste- og systemnivå innen psykisk helse- og rusfeltet i Norden og Sápmi. Den inkluderer også et vedlegg med oversikt over samarbeidsbasert forskning.

Metode

For å besvare oppdraget utarbeidet vi en plan om litteratursøk. I denne rapporten fremstiller vi kunnskapsinnhentingens resultater i en rapport med tilhørende vedlegg. Vedleggene synliggjør kunnskapshull på en god måte. Metoden innebar systematiske litteratursøk hvor vi søkte i 6 databaser, gjorde en utvelgelse av studier basert på forhåndsbestemte eksklusjons- og inklusjonskriterier, videre sortering, koding og analyse av inkluderte studier. I første omgang sorterte vi studiene etter hvilke nivå de tilhørte (se vedlegg 6-9), og i andre omgang etter hvilke aldersgrupper de omhandler (se vedlegg 10-13). I analysen, kodet vi studiene inn i fremtredende tema (se vedlegg 14-21.). Den siste kodingen omhandler hovedstrømninger innenfor de temaene vi fant under første koding.

Prosjektplan

I utgangspunktet ble det arbeidet med en strategi for å søke på kvalitativ litteratur i en nasjonal og internasjonal kontekst. Dette ble imidlertid for omfattende, og vi utarbeidet tre ulike strategier for litteratursøk innen (1) norsk kontekst, (2) samisk kontekst, og (3) en nordisk kontekst. Strategiene fulgte kunnskapsbasert litteratursøk, forankret i utvalgte PICO-formuleringer. PICO er en engelsk forkortelse for:

- Pasient, population, problem (pasient, populasjon, problem)
- Intervention, exposure (intervensjon, eksponering)
- Comparator (sammenligning)
- Outcome (utfall)

Problemstillingen var å kartlegge kvalitativ forskning om brukermedvirkning (og pårørendemedvirkning) på ulike nivå innen psykisk helse og rus, og avdekke eventuelle områder der forskningen er mangelfull. Kvalitativ forskning undersøker og beskriver menneskers opplevelser og erfaringer, men kan også sette søkelys på utfordringer i samhandling på alle nivåer av brukermedvirkning (og pårørendemedvirkning).

PICO er nyttig for å identifisere og organisere søkeord, også når man gjør litteratursøk på kvalitative studier. Det ble utarbeidet tre ulike strategier knyttet til de ulike kontekstene vi ønsket å se nærmere på. I samarbeid med en bibliotekar fra FHI (Astrid Nøstberg) ble ekstern fagansvarlig (Rita Sørly) enig om å gjennomføre søkene på følgende måte:

Tabell 1: Litteratursøk norsk kontekst

Studiedesign	Kvalitative studier om brukermedvirkning innen psykisk helse og rus
Populasjon	Pasienter, brukere, tjenestemottakere, pårørende, verger, brukerorganisasjoner, tjenester og institusjoner innen psykisk helse og rusfeltet. Brukere av tjenester innen både kommunale tjenester, primær- og spesialisthelsetjenesten (rusmiddelproblemer og psykisk helse) eller pårørende/verger av disse. Dette gjelder også brukere under tvungen behandling. Inkluderer alle aldersgrupper.
Intervensjon	Brukermedvirkning
Sammenligning	Ingen brukermedvirkning, eller andre former for medvirkning
Utfall	Viser hva som fremmer/hemmer brukermedvirkning
Publikasjonsår	2012- 2022
Land	Norge

Språk	Norsk, engelsk
--------------	----------------

Tabell 2: Litteratursøk samisk kontekst

Studiedesign	Kvalitative studier om brukermedvirkning innen psykisk helse og rus
Populasjon	Pasienter, brukere, tjenestemottakere, pårørende, verger, brukerorganisasjoner, tjenester og institusjoner innen psykisk helse og rusfeltet. Brukere av tjenester innen både kommunale tjenester, primær- og spesialisthelsetjenesten (rusmiddelproblemer og psykisk helse) eller pårørende/verger av disse. Dette gjelder også brukere under tvungen behandling. Inkluderer alle aldersgrupper.
Intervensjon	Brukermedvirkning
Sammenligning	Ingen brukermedvirkning, eller andre former for medvirkning
Utfall	Viser hva som fremmer/hemmer brukermedvirkning
Publikasjonsår	2012- 2022
Land	Norge, Sverige, Finland og Russland (Sapmi)
Språk	Norsk, engelsk

Tabell 3: Litteratursøk nordisk kontekst

Studiedesign	Kvalitative studier om brukermedvirkning innen psykisk helse og rus
Populasjon	Pasienter, brukere, tjenestemottakere, pårørende, verger, brukerorganisasjoner, tjenester og institusjoner innen psykisk helse og rusfeltet. Brukere av tjenester innen både kommunale tjenester, primær- og spesialisthelsetjenesten (rusmiddelproblemer og psykisk helse) eller pårørende/verger av disse. Dette gjelder også brukere under tvungen behandling. Inkluderer alle aldersgrupper.
Intervensjon	Brukermedvirkning
Sammenligning	Ingen brukermedvirkning, eller andre former for medvirkning
Utfall	Viser hva som fremmer/hemmer brukermedvirkning
Publikasjonsår	2012- 2022
Land	Sverige, Danmark, Finland, Island
Språk	Skandinavisk- språklig, engelsk

Litteratursøk

Bibliotekar Astrid Nøstberg, FHI utførte det systematiske litteratursøket etter publikasjoner i elektroniske databaser. Hun utarbeidet en søkestrategi basert på inklusjonskriteriene, og med en kombinasjon av emneord (for eksempel Mesh i MEDLINE) og tekstord som omfattet psykisk helse, rus og ulike former for brukermedvirkning (vedlegg 1- 5). Samtlige søk ble fagfellevurdert av bibliotekarer fra FHI. Litteratursøket ble avgrenset til publisering i 2012- 2022. Det ble søkt systematisk etter litteratur i følgende databaser:

- MEDLINE (OVID)
- APA PsycINFO (OVID)
- Cochrane Library [CDSR, CENTRAL] (Wiley)
- CINAHL (EBSCO)

- ORIA
- SveMed+

Resultat av innledende litteratursøk:

Tabell 4: Oversikt innledende litteratursøk

Søk	Databaser	Antall treff
Norsk søk, norsk språk	ORIA, SVEMED	706
Norsk søk, engelsk språk	Medline, Psycinfo, Scopus, Cinahl	983
Samisk søk – norsk og skandinavisk språk	ORIA, SVEMED	29
Samisk søk—engelsk språk	Medline, Psycinfo, Scopus, Cinahl	133
Nordisk søk – skandinavisk og engelsk språk	ORIA; SVEMED, Medline, Psycinfo, Scopus, Cinahl	2094
Totalt antall treff		3945

Søket startet opp i mars, og ble avsluttet i juni 2022. Referansene identifisert gjennom litteratursøket ble importert til referansehåndteringsverktøyet EndNote for fjerning av dubletter.

Ekklusjonskriterier

Vi ekskluderte følgende typer studier og publikasjoner:

Tabell 5: Oversikt eksklusjonskriterier litteratursøk

Kvantitative studier
Studier med mixed methods- design
Komparative studier som sammenligner Norge/ Norden og andre land
Studier som ikke omhandler psykisk helse og rus (f.eks. personer med demens eller andre somatiske tilstander)
Internasjonale studier
Litteratur reviews eller litteraturgjennomgang

De internasjonale studiene ble ekskludert på grunn av oppdragets rammer. Prosjektet hadde ikke tilstrekkelig ressurser eller tid til å inkludere internasjonale søk.

Inklusjonskriterier

Vi inkluderte norske, nordiske og samiske forskningsstudier med et kvalitativt design fra periode 2012- 2022. Studiene omhandler brukermedvirkning innen psykisk helse- og rusfeltet, og de inkluderer alle aldersgrupper i befolkningen. Søket inkluderte også pårørendemedvirkning. Alle inkluderte studier er fagfellevurderte artikler, publisert i anerkjente, vitenskapelig tidsskrifter. Artiklene er enten på norsk, et skandinavisk språk eller engelsk.

Utvelgning av oversikter

Vi importerte alle 3945 referanser fra litteratursøkene inn i End Note bibliotek. Ekstern fagansvarlig Rita Sørly, professor ved Institutt for barnevern og sosialt arbeid, UiT Norges Arktiske Universitet, har ledet arbeidet med gjennomgang av søk, og Vår Mathisen, førsteamanuensis ved Institutt for helse- og omsorgsfag ved UiT Norges Arktiske Universitet ble engasjert for å kunne bistå i gjennomgangen. Samtlige søk er gjennomgått av begge forskerne.

Sammendrag som ble vurdert som relevante ble innhentet i fulltekst. Dette utgjorde 508 publikasjoner. Sørly og Mathisen har lest publikasjonene, og uavhengig av hverandre vurdert hvorvidt publikasjonene møtte inklusjonskriteriene. Eventuelle uenigheter angående vurdering ble løst ved diskusjoner. På samisk søk, ble det på grunn av mangelfulle treff på relevante søk, lagt til 18 publikasjoner ved hjelp av snøballmetode. Det totale antall treff på inkluderte studier er da 526 publikasjoner.

Sortering og koding

Vi gikk gjennom sammendragene i flere omganger. Ved første gjennomgang var søkelys på sortering basert på eksklusjonskriteriene, og hvilke studier som ikke var relevante for brukermedvirkning innen psykisk helse- og rusfeltet. Ved andre gjennomgang, sikret vi at studiene vi inkluderte var innenfor inklusjonskriteriene. Ved sorteringene, kodingene og analysen kategoriserte vi søk etter gjentakende tema som ble fremtredende i leseprosessene.

Flere av sammendragene kan gå inn under flere tema, men vi har drøftet oss frem til en enighet om plassering i tilfeller dette har vært aktuelt. En skjematisk fremstilling av kodingsprosessen ser ut som følger.

Tabell 6: Oversikt kodingsprosesser

Sortering og kodingsprosesser	Beskrivelse
Eksklusjon	Ekkluderte følgende studier: • Studier med mixed methods- design • Kvantitative studier • Komparative studier som sammenligner Norge og andre land • Studier som ikke omhandler psykisk helse og rus (f.eks. personer med demens eller andre somatiske tilstander) • Internasjonale studier • Litteratur reviews eller litteraturgjennomgang
Inklusjon	Sikret at alle studier var innenfor inklusjonskriteriene: • Kvalitativ forskning • Publikasjonsår 2012- 2022 • Omhandler brukermedvirkning innen psykisk helse og rus • Inkluderer alle aldersgrupper • Norsk, samisk og nordisk kontekst • Fagfellevurderte, publisert i anerkjente vitenskapelige tidsskrift
	Kategoriserte søk inn i følgende områder: • Individnivå (bruker)

Sortering	• Tjenestenivå • Systemnivå
Sortering	Kategoriserte søk inn i livsløpsperspektiv: • Barn • Barn/ ungdom • Voksne (fra 18 år) • Eldre
Første koding	Analyserte søk (både på individnivå og på tjeneste- og systemnivå) inn i følgende tema: • Recovery • Samarbeid og dialog • Helsekompetanse og myndiggjøring • Planer og verktøy • Familie, pårørende og nettverksarbeid • Samarbeidsbasert forskning
Andre koding	Innenfor recovery, samarbeid og dialog, helsekompetanse og myndiggjøring, planer og verktøy, familie, pårørende og nettverksarbeid, samt samarbeidsbasert forskning, fant vi hovedstrømninger innenfor norsk, samisk og nordisk kontekst. Disse funnene er presentert under resultatdelen.

Resultat av litteratursøk etter eksklusjon:

Tabell 7: Oversikt litteratur etter eksklusjon

Søk	Databaser	Antall treff
Norsk søk, norsk språk	ORIA, SVEMED	82
Norsk søk, engelsk språk	Medline, Psycinfo, Scopus, Cinahl	224
Samisk søk – norsk og skandinavisk språk	ORIA, SVEMED	10
Samisk søk—engelsk språk	Medline, Psycinfo, Scopus, Cinahl	19
Nordisk søk – skandinavisk og engelsk språk	ORIA; SVEMED, Medline, Psycinfo, Scopus, Cinahl	173
Totalt antall treff		508

På samisk søk, ble det på grunn av mangelfulle treff på relevante søk, lagt til 18 publikasjoner ved hjelp av snøballmetode. Det totale antall treff på inkluderte studier er da 526 publikasjoner.

Styrker og begrensinger ved rapporten og vedleggene

Styrkene ved rapporten og de tilhørende vedleggene er samarbeidet med oppdragsgiver og fageksperter om prosjektplan, det systematiske litteratursøket utført av FHI- bibliotekarer, og den kvalitetssikrede prosessen med utvelgelse og kategorisering av studiene.

Brukermedvirkning innen psykisk helse og rusfeltet er et bredt og omfattende felt, og det er til tider utfordrende å trekke grenser mellom det relevante og det mindre relevante. Dette kan ha medført inkludering, eller utelatelse, av studier noen vil tenke er mer eller mindre relevante. Brukermedvirkning omhandler mange tiltak, og ulike tilnærminger innenfor fagfeltet. På grunn av rammene for arbeidet, begrenset vi søkene til å omhandle norsk, nordisk og samisk kontekst. Det vil kunne være studier utenfor litteratursøket, som er relevante.

I det nordiske søket fikk vi svært få treff på danskspråklige og svenskspråklige studier. I de norske og nordiske databaser (Oria og Svemed) ble det søkt med norske tekstord, men MeSH skal fange opp artikler på andre språk, også svensk og dansk. Likevel har dette vist seg som en svakhet med den nordiske delen av litteratursøket (for nordiske søk, se vedlegg 1 og 5).

Innenfor rammene av prosjektet kunne vi ikke vurdere studienes metodiske kvalitet, og dermed kan vi si lite om reliabilitet i studiene.

Sammendragene av studiene inkluderer ikke alltid resultater av eventuelle implementeringer/ tiltak, og kartleggingen gir dermed ikke svar på effekten av brukermedvirkning. Det har vært et mål å sette søkelys på studier som sier noe om hva som fremmer og hemmer brukermedvirkning innen fagfeltet. Det kommer ikke alltid like tydelig frem i sammendragene av studiene, og det er da nødvendig å lese de aktuelle studiene i sin helhet.

Det er viktig å merke seg at det kan finnes studier på temaet som ikke er inkludert i denne rapporten.

Vurdering av metodisk kvalitet

På grunn av tidsrammene for prosjektet har vi ikke vurdert metodisk kvalitet i de enkelte studiene. Vi har sikret at samtlige studier er kvalitative, men de varierer i bruk av tilnærminger, datainnsamling, analyser og teoretiske perspektiver.

Uthenting av data og presentasjon

Sørly og Mathisen har hentet ut data fra samtlige publikasjoner, og kontrollert disse. Følgende data ble hentet ut: utgivelsesår, land, type og nivå brukermedvirkning i psykisk helse og rus, antall deltakere, populasjon, aldersgruppe, setting, målgruppe, utfall, klinisk/praktisk relevans, formål og eventuell avdekking av kunnskapshull. Utover dette fulgte vi arbeidsprosessene som beskrevet ovenfor.

Analytiske valg

Problemstillingen har vært hva fremmer godt samarbeid om brukermedvirkning innen psykisk helse og rusfeltet, ifølge kvalitativ forskning fra Norden og Sápmi i perioden 2012- 2022.

I arbeidet med sortering og koding, har vi fulgt skjema på side 13-14. Vi startet med et enkelt abstract om gangen, og sorterte disse. Først sorterte vi de ulike nivåene innenfor brukermedvirkning. Deretter sorterte vi på ulike livsløp; altså hvilken befolkning forskningen dreide seg om. I første kodingsprosess analyserte vi frem tema som viste seg som fremtredende og gjentakende. I tråd med Braun og Clarke(2006) forsøkte vi ikke å tilpasse dataene inn i en eksisterende kodingsramme, men analysen ble drevet av datamaterialet.

Temaene ble videre kondensert. Flere artikler kunne vært kodet under forskjellige kategorier (eksempelvis er recovery valgt som et tema, og samarbeid og dialog som et annet.) Noen tema kan oppleves som overlappende.

Ved andre koding, gikk vi inn i tema fra første koding, og fant hovedstrømninger innenfor de ulike temaene. Eksempelvis handlet artikler knyttet til recovery i stor grad om relasjoner og meningsfulle aktiviteter. Hovedstrømningene mener vi gir en mer detaljert innsikt i forskningen om brukermedvirkning. De gir også en pekepinn på hva som mangler innenfor den nordiske og samiske, kvalitative forskningen, og hva som bør prioriteres fremover.

Digital formidling

En del av rapportens leveranse er vedlegg. Disse vedleggene utgjør kategoriseringer av resultatene, og kan virke som ressurser for interesserte som ønsker å gå i dybden på resultatene. Hvert vedlegg er en oversikt over artikler som tilhører de ulike kategoriseringene som er utført.

Vedleggene er organisert inn på følgende måte:

- Oversikt over antall artikler på individnivå og tjeneste- og systemnivå (vedlegg 6-9)
- Oversikt over antall artikler i henhold til livsløpsperspektiv (ulike aldersgrupper i populasjonen) (vedlegg 10-13)
- Oversikt over artikler innenfor temaene: recovery, samarbeid og dialog, helsekompetanse og myndiggjøring, planer og verktøy, tjenesteutvikling og familie, pårørende og nettverksarbeid (vedlegg 14-20)
- Oversikt over artikler som omhandler samarbeidsbasert forskning (vedlegg 21)

Resultater

Resultatene av litteraturgjennomgangen er omfattende. På grunn av prosjektets begrensede tidsperspektiv, har det vært nødvendig å avgrense rapportens omfang. Vi har derfor valgt å presentere hovedfunn kortfattet i rapporten, med henvisninger til tilhørende vedlegg for de som ønsker mer inngående innsikt. Utvalget av artikler som refereres til, er eksempler på fremtredende tematikk fra analysen. De refererte artiklene er valgt ut på bakgrunn av bredde og variasjon.

Man skal kunne klikke seg inn på vedleggene, og da kommer man til en referanseliste hvor man kan gå videre til originalkildene, for videre fordypning.

Studiekarakteristika

De inkluderte sammendragene inneholdt studier publisert mellom 2012- 2022 fra Norge, Sverige, Danmark, Finland og Sápmi. Studiene er enten på norsk, skandinavisk språk, eller engelsk.

Omfang

Studiene var av ulike omfang og fokus, og inkluderte totalt 508 publikasjoner. Flere av sammendragene omhandlet flere typer tiltak, populasjoner og områder innenfor en nordisk og samisk kontekst.

Hovedfunn

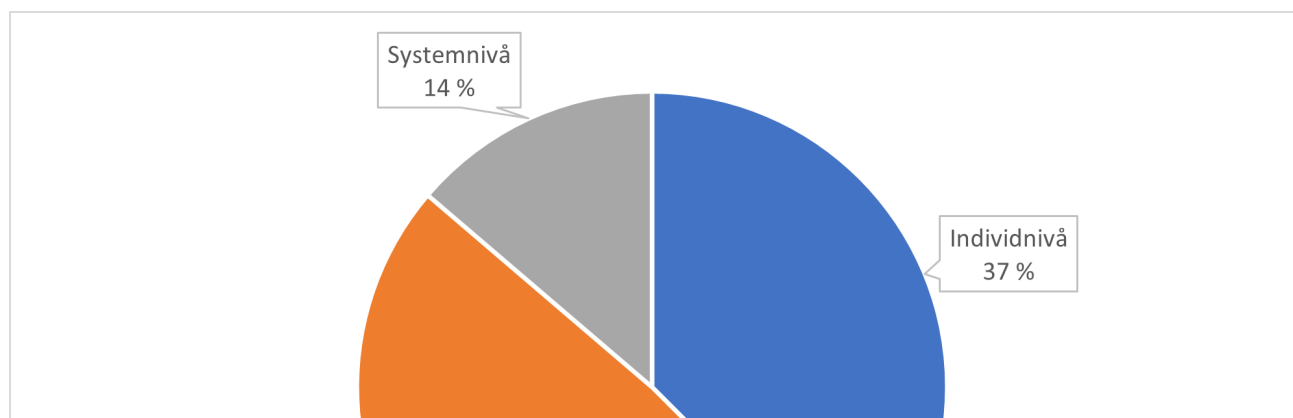

Hovedfunnene er presentert inn i følgende kategorier:

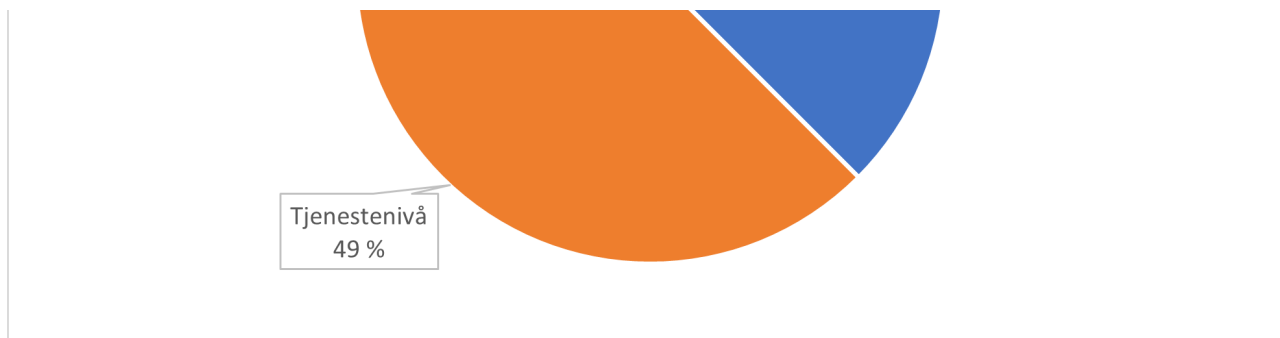

1. Individnivå og tjeneste- og systemnivå
2. Livsløpsperspektiv
3. Tema med tilhørende hovedstrømninger

I det følgende vil vi presentere de ulike funnene innenfor hver kategori, med henvisninger til vedlegg (som beskrevet ovenfor).

Fordeling av nivå

Funn norsk søk – norsk språk

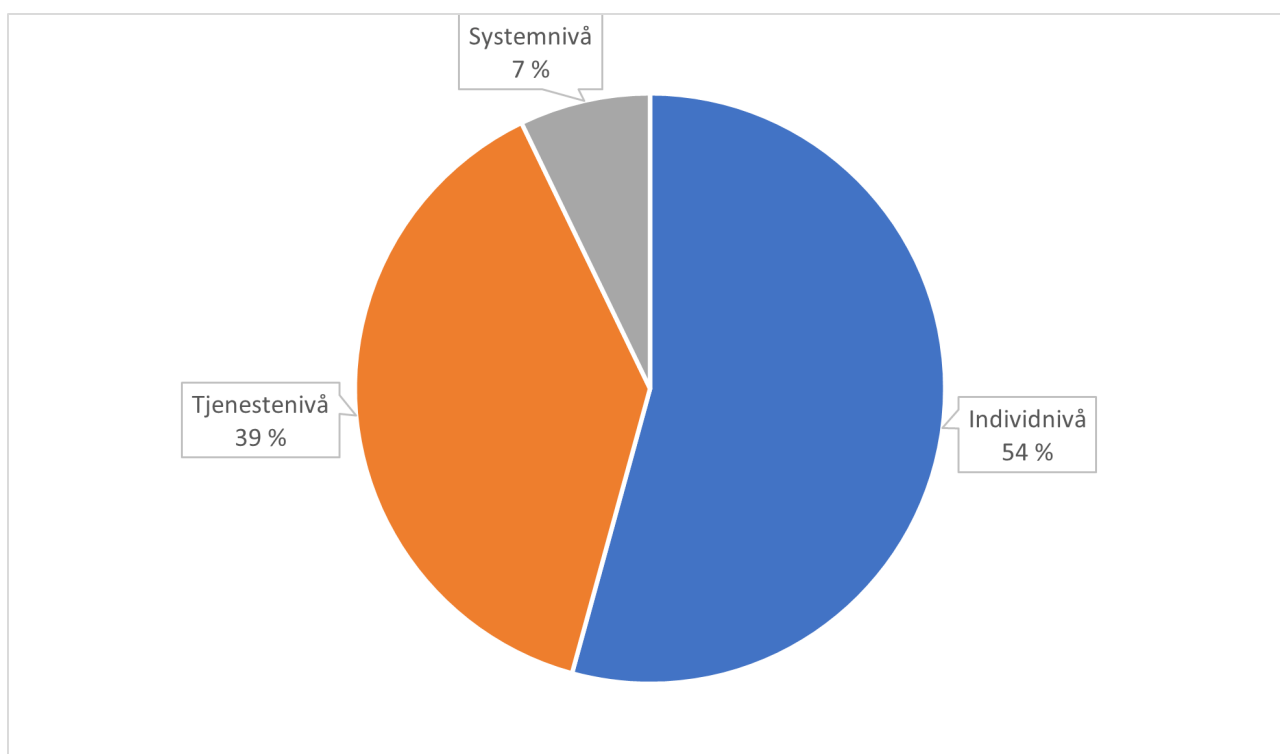

Hovedandelen av norske artikler med norsk språk omhandler tjenestenivå. Som vi ser av diagrammet, er hele 49 % av artiklene knyttet til tjenestenivå. På individnivå er 37 % av artiklene plassert, mens det som omhandler systemnivå utgjør 14 %.

[For videre innsikt i artikler innenfor norsk søk – norsk språk, se vedlegg 6.](#)

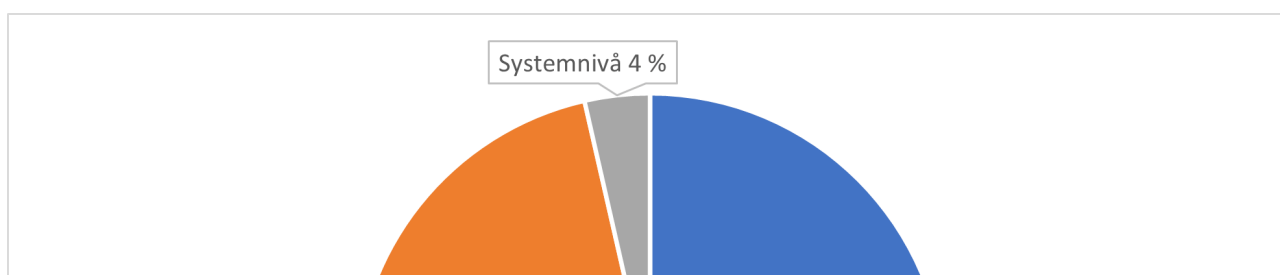

Funn norsk søk - engelsk språk

Sorteringen av norsk søk, engelsk språk, viser mye forskning på individnivå. Her utgjør kategorien 54%, mens artikler om tjenestenivået utgjør 39 %. Det er kun 7% av kvalitative forskningsartikler i denne kategorien som tar opp systemnivået.

[For videre innsikt i artikler innenfor norsk søk – engelsk språk, se vedlegg 7.](#)

Funn samisk søk - norsk, skandinavisk og engelsk språk

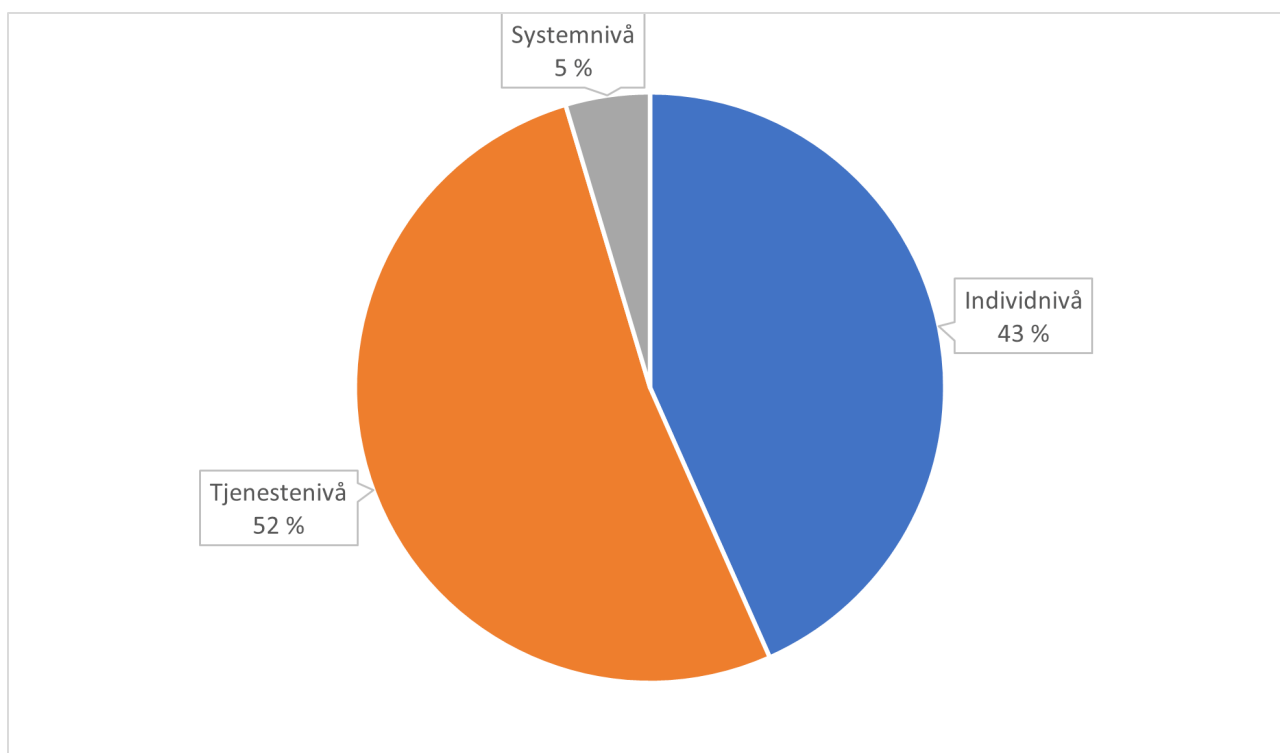

Under sorteringen av samisk søk, ble alle søkene inkludert i denne oversikten, på grunn av et samlet færre antall treff. Det er interessant å merke seg at fordelingen av kvalitativ forskning på individnivå og tjenestenivå er ganske jevn. Det er helt tydelig at det er behov for mer forskning på det som omhandler systemnivå; her finner vi kun 4% av funnene.

[For videre innsikt i artikler innenfor samisk søk – norsk, skandinavisk og engelsk språk, se vedlegg 8.](#)

Funn nordisk søk – skandinavisk og engelsk språk

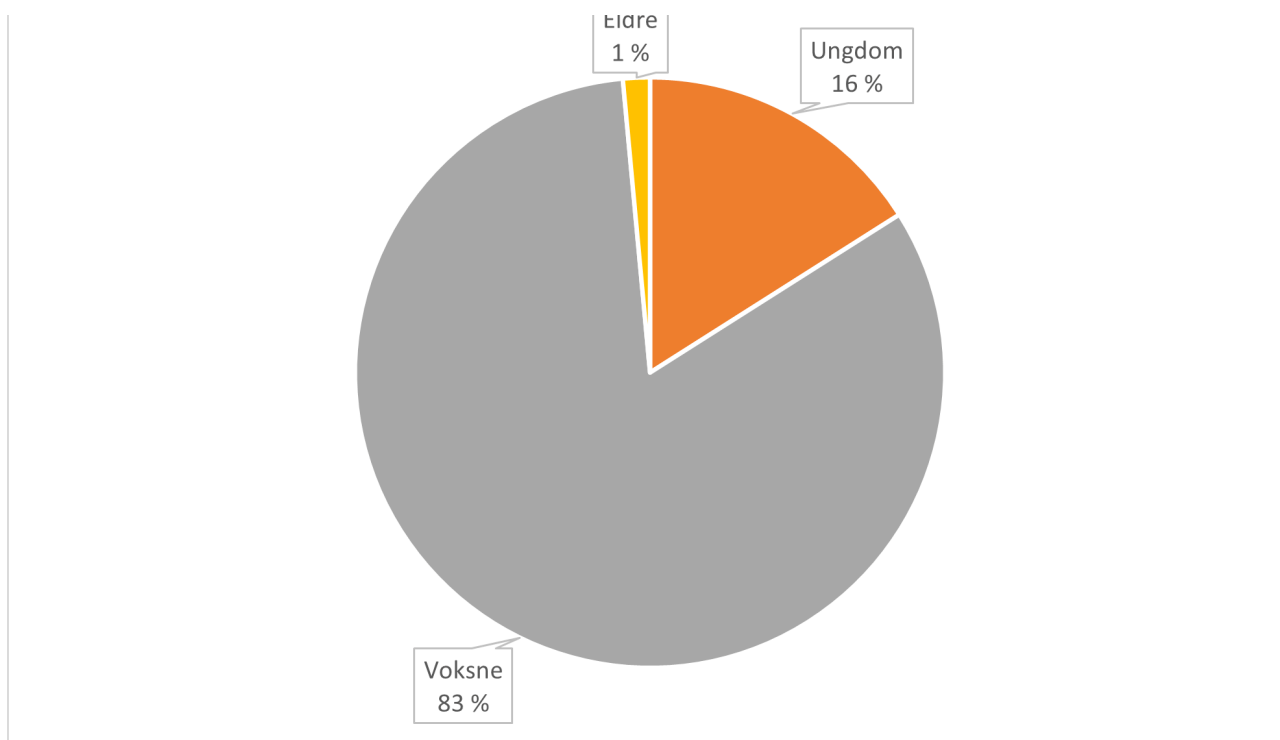

I nordisk søk finner vi at hovedtyngden av artikler omhandler tjenestenivå, og det som har søkelys på individnivå, utgjør 43 %. Også her er det få artikler på systemnivå, og dette utgjør kun 5 % av funnene.

[For videre innsikt i artikler innenfor nordisk søk- skandinavisk og engelsk språk, se vedlegg 9.](#)

Livsløpsperspektiv

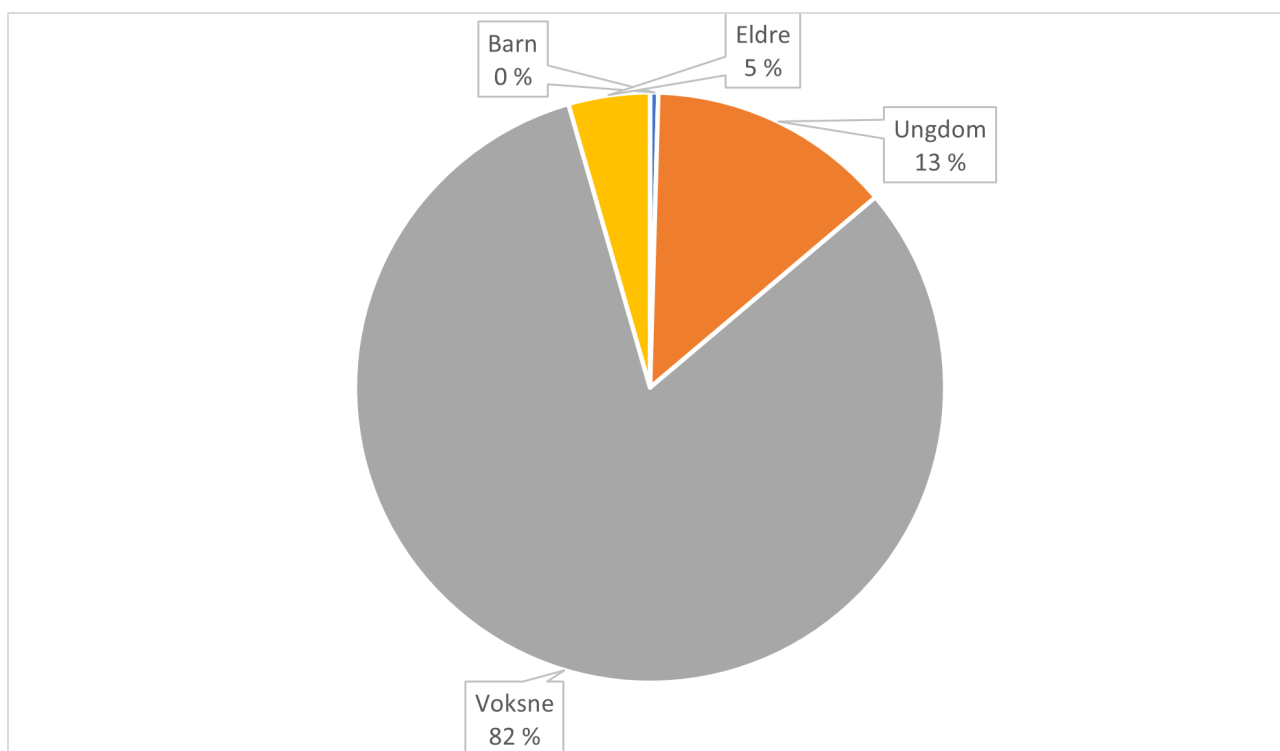

Funn norsk søk - norsk språk

I sorteringen av livsløp, ser vi at 83 % av artiklene i norsk søk på norsk språk handler om voksne. Det er ingen artikler som har barn i søkelyset, og kun 16 % omhandler ungdom. Resultatet hva gjelder eldre, viser også et tydelig kunnskapshull. Kun 1 % av artiklene omhandler eldre.

[For videre innsikt i artikler innenfor norsk søk – norsk språk, se vedlegg 10.](#)

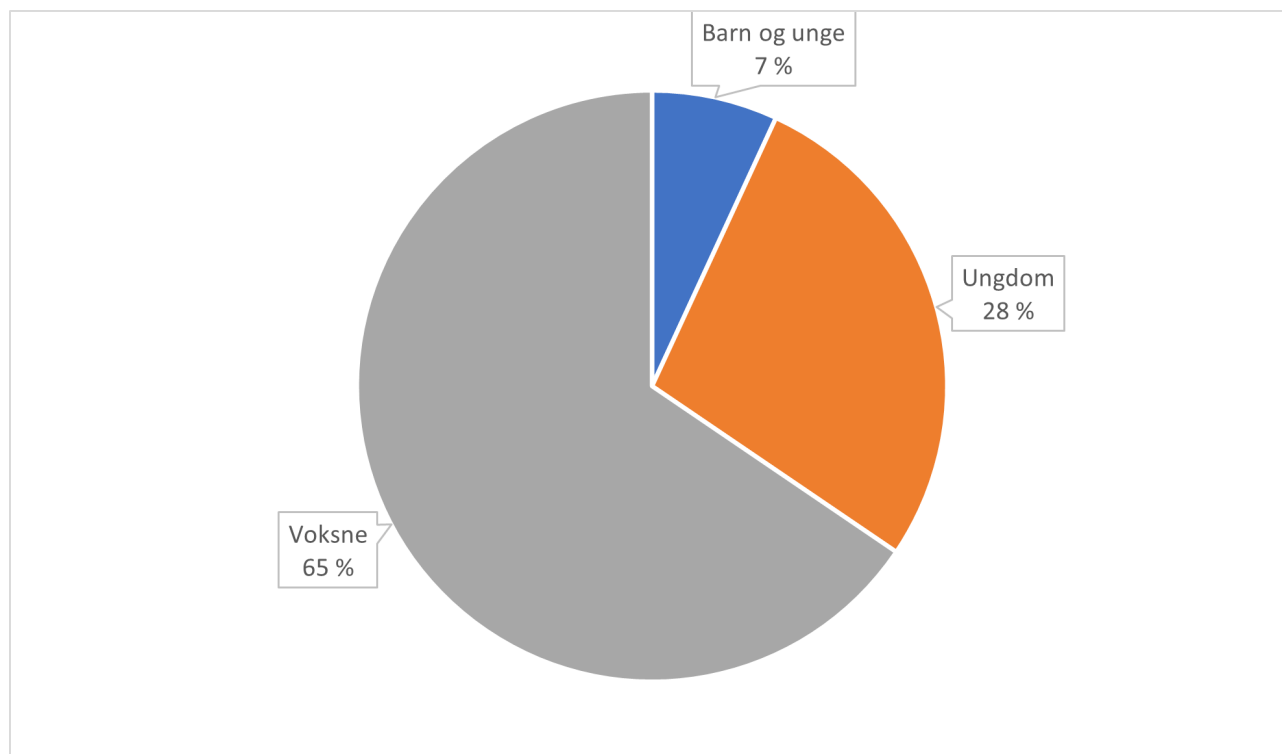

Funn norsk søk- engelsk språk

I norsk søk, engelsk språk viser sorteringen innen livsløp, at hele 82 % av artiklene i kvalitativ forskning setter søkelys på voksne. Vi fant at 13% av artiklene omhandler ungdom, og bare 5% eldre. En artikkel ble funnet om barn.

[For videre innsikt i artikler innenfor norsk søk – engelsk språk, se vedlegg 11.](#)

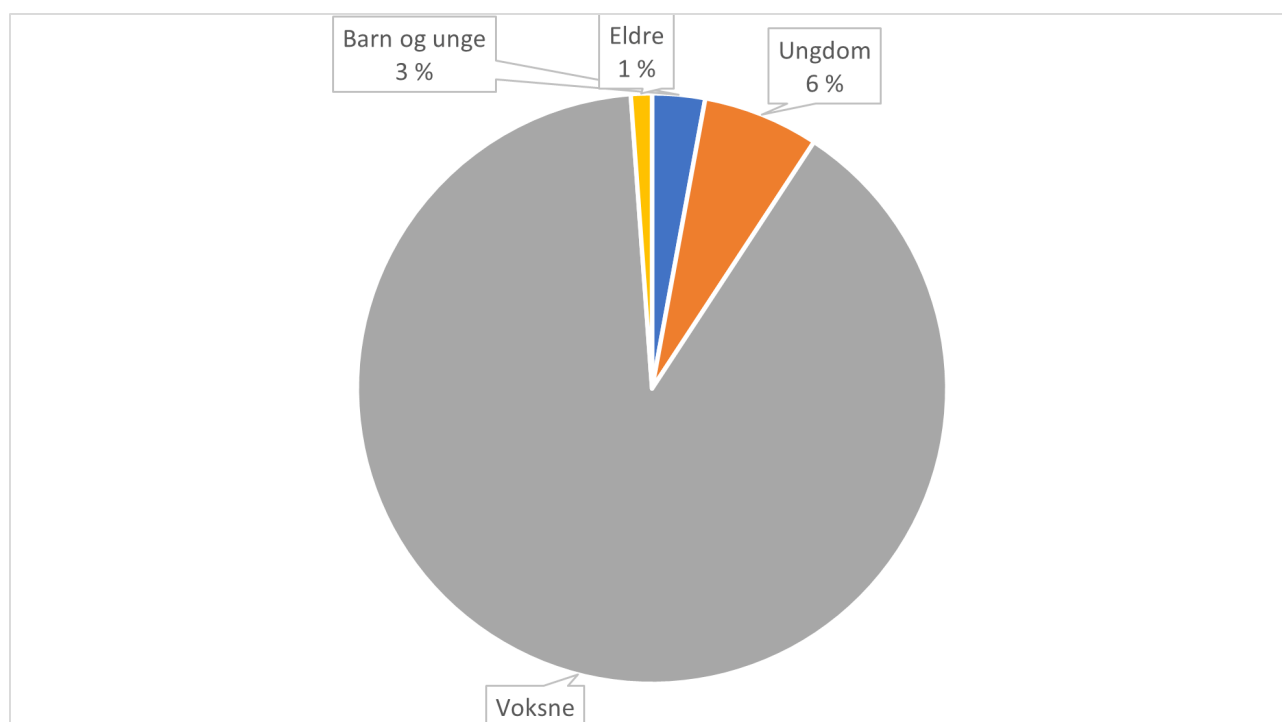

Funn samisk søk – norsk, engelsk og skandinaviske språk

Under sorteringen av samisk søk, ble alle søkene inkludert i denne oversikten, på grunn av et samlet færre antall treff. Også her ser vi at studiene hovedsakelig handler om voksne (65%), men her viser treff at 7 % av samiske studier handler om barn og unge. Ungdomsstudier utgjør 28 % av funnene, men ingen funn tar for seg eldre.

[For videre innsikt i artikler innenfor samisk søk – norsk, skandinavisk og engelsk språk, se vedlegg 12.](#)

Funn nordisk søk – skandinavisk og engelsk språk

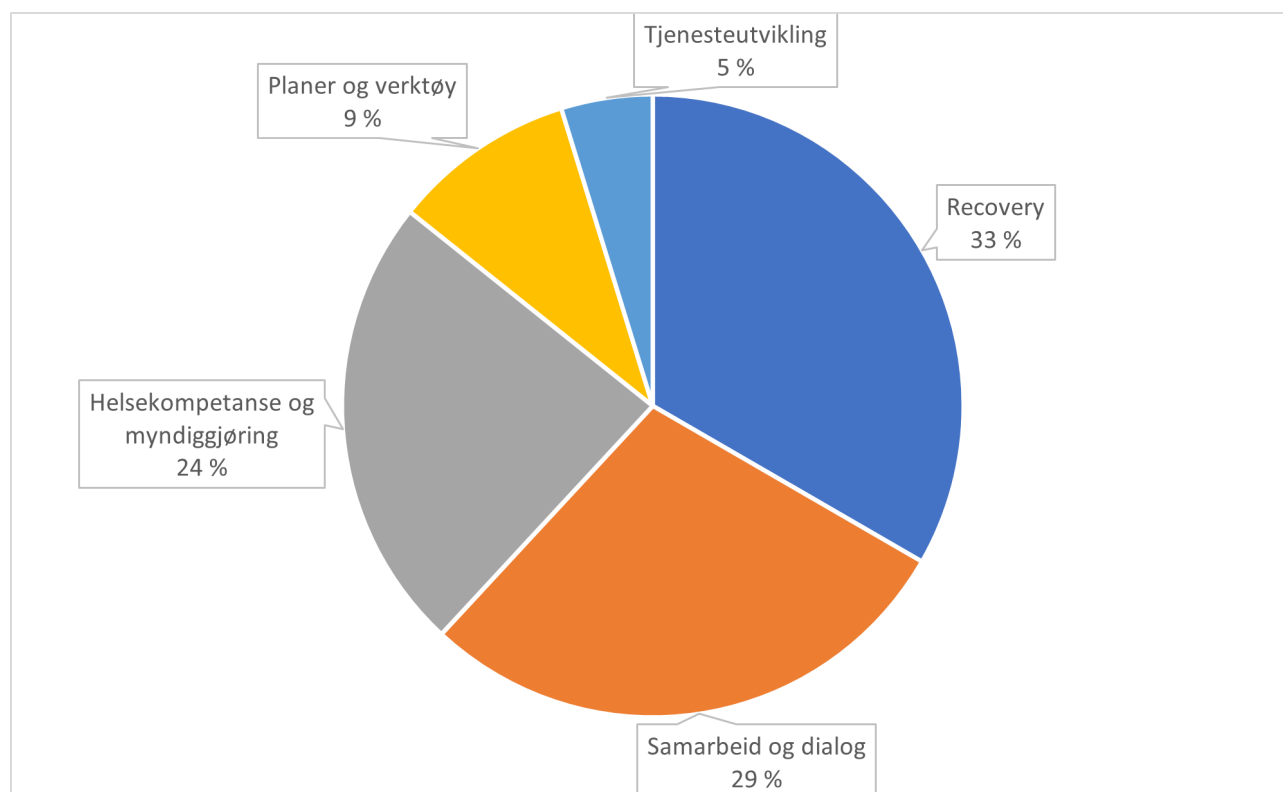

Innenfor nordisk søk, finner vi at hele 90 % av studiene handler om voksne. Mens 3 % av artiklene handler om barn og unge, handler 6 % om ungdom. Kun en prosent av artiklene tar for seg eldre.

[For videre innsikt i artikler innenfor nordisk søk- skandinavisk og engelsk språk, se vedlegg 13.](#)

Tema med tilhørende hovedstrømninger

Funn individnivå norsk søk- norsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, norsk språk, fant vi 7 artikler om recovery. Et sentralt tema i artiklene omhandler bolig, og det å få bestemme over egen recoveryprosess (Andvig et al., 2013; Hansen, 2020). Et annet fremtredende tema er relasjoner, og det å samarbeide med det som brukeren synes er viktig (Bøe et al., 2021; Einbu & Larsen, 2016).

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, norsk språk, fant vi 7 artikler om samarbeid og dialog. Fremtredende tema her omhandler fleksible tilbud (Årseth et al., 2019), inkludering i behandling (Sælør et al., 2019) og oppfølging (Lippestad & Steihaug, 2015).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, norsk språk, fant vi 6 artikler om helsekompetanse og myndiggjøring. Disse omhandler tema som erfaringer som aktør i egen behandling (Grønnestad & Vevatne, 2013; Larsgaard et al., 2020) og maktfordeling (Lorem et al., 2014).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 norsk søk, norsk språk, fant vi 2 artikler om planer og verktøy. Disse handler om rusprogram innenfor kriminalomsorgen (Hansen, 2014), og samtalegrupper innenfor allmennpsykiatrien (Hassel et al., 2016).

Tjenesteutvikling

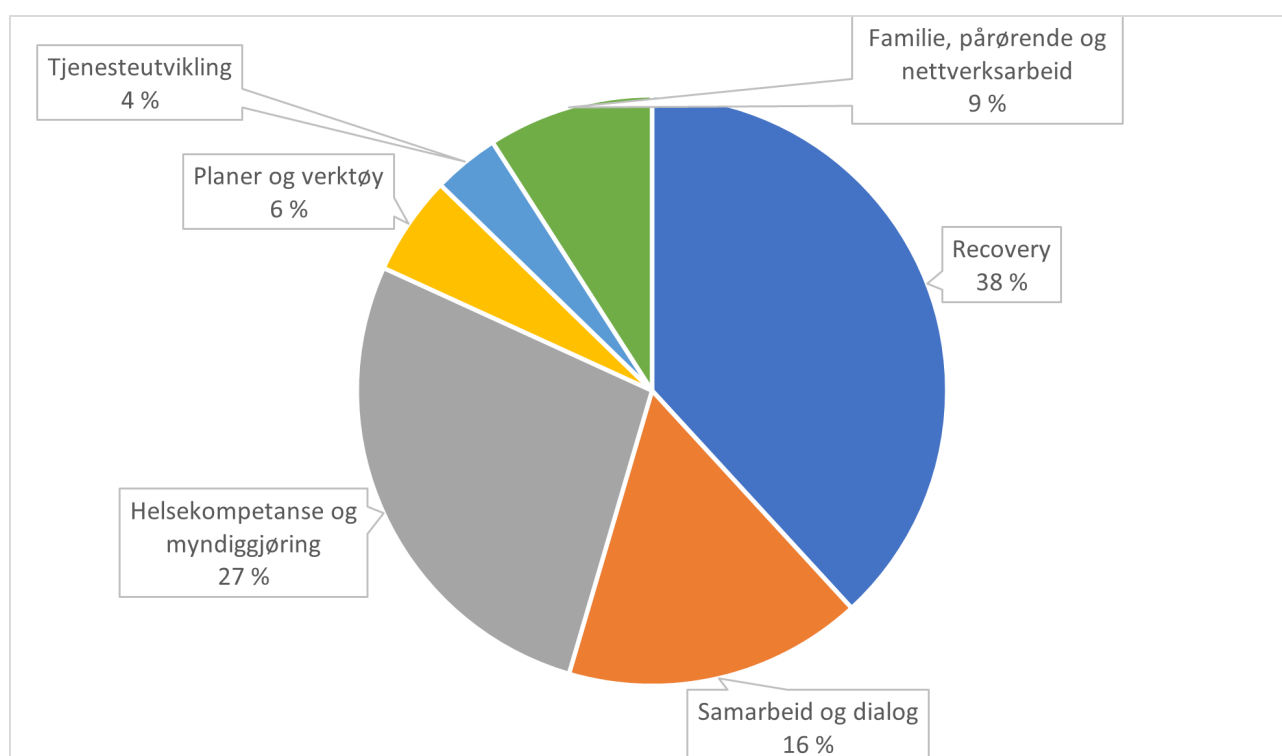

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, norsk språk, fant vi en artikkel om tjenesteutvikling. Denne fokuserer på kriminalomsorg, og understreker behovet for økt behandling og rehabilitering (Helgesen, 2017).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, norsk språk, fant vi 5 artikler om familie, pårørende og nettverksarbeid. Det sentrale temaet blant disse er erfaringer fra pårørende (Borg et al., 2012; Ødegård et al., 2015), og artiklene påpeker viktigheten av inkludering og samarbeid.

[For videre innsikt i artikler innenfor Individnivå – norsk søk – norsk språk, se vedlegg 14.](#)

Funn tjeneste- og systemnivå norsk søk – norsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå norsk søk, norsk språk, fant vi 21 artikler om recovery. Et hovedtema er å bygge gode relasjoner (Borg et al., 2013; Ness et al., 2013). Et annet sentralt tema er viktigheten av erfaringskonsulenter og likepersoner i praksis (Rossen & Elstad, 2021; Sivertsen & Mydland, 2021).

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå norsk søk, norsk språk, fant vi 9 artikler om samarbeid og dialog. Bedre samarbeid på tvers er et fremtredende tema(Hansen, 2018; Hynnekleiv et al., 2016). Åpen dialog og nettverksmøter er et annet viktig tema(Sørgård & Karlsson, 2017).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå norsk søk, norsk språk, fant vi 16 artikler om helsekompetanse og myndiggjøring. En andel av artiklene setter søkelys på tjenesteperspektiv(Naess & Biong, 2014; Paulsen, 2018), og hvordan brukermedvirkning utøves(Mathisen et al., 2015). Andre artikler ser nærmere på betydningen av samarbeid(Gullslett, 2017; Hansen & Ramsdal, 2014). Et sentralt tema er også erfaring med myndiggjørende arbeid(Bruland & Grov, 2016; Ulset & Tjelflaat, 2013).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå norsk søk, norsk språk, fant vi 3 artikler om planer og verktøy. To av artiklene omhandler samarbeid; den ene er knyttet til eldre pasienter(Hoff et al., 2017), mens den andre ser nærmere på samtykkekompetanse(Østenstad, 2021). Siste artikkel tar for seg BrukerPlan(Lønning et al., 2018).

Tjenesteutvikling

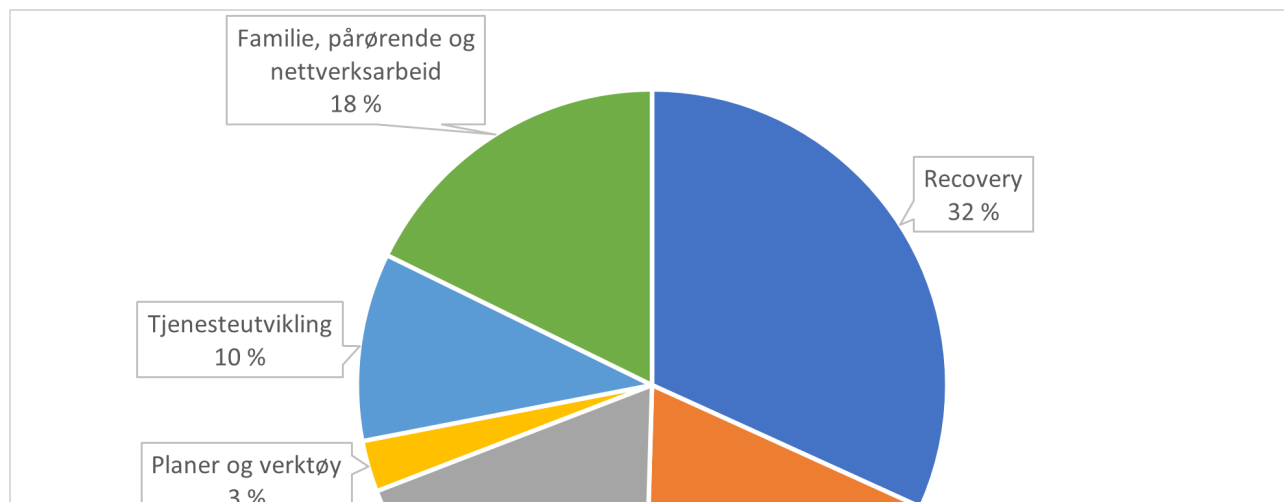

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk språk, fant vi 2 artikler om tjenesteutvikling. Den ene artikkelen handler om bruk av fysisk aktivitet(Sellereite et al., 2019) og den andre handler om natur- og gårdsaktiviteter(Sollesnes et al., 2017).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå norsk søk, norsk språk, fant vi 5 artikler om familie, pårørende og nettverksarbeid. To artikler omhandler samarbeid(Bjørkquist & Hansen, 2017; Steig & Andersen, 2013), og to omhandler erfaringer fra tjenesteperspektiv(Kalsås et al., 2020; Saus et al., 2017). Den siste artikkelen ser på fosterforeldres erfaringer med utilsiktet flytting fra fosterhjem(Ødegård et al., 2015).

[For videre innsikt i artikler innenfor tjeneste- og systemnivå norsk søk, norsk språk, se vedlegg 15.](#)

Funn individnivå norsk søk – engelsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 33 artikler om recovery. Hovedtyngden av artikler handler om brukerinvolvering, ofte i form av å gjøre reflekterte valg (Bjornestad et al., 2019; Hansen et al., 2020; Lofthus et al., 2018; Sørly et al., 2022). En betydelig andel av artiklene handler om meningsfulle aktiviteter (Bahl et al., 2022; Nordaunet & Sælør, 2018) og selvhjelp (Biringe et al., 2016; Bjornestad et al., 2017). Relasjoner er også et viktig tema (Brekke et al., 2017; Pettersen et al., 2019).

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 20 artikler om samarbeid og dialog. Overordnet tema blant disse er pasientsentrert arbeid (Adnoy Eriksen et al., 2014; Husby et al., 2019; Soggiu et al., 2020), og behov for endring av praksis (Husum et al., 2019; Saelor & Skatvedt, 2019). I en artikkel artikuleres et behov for en tydeliggjøring av hva brukermedvirkning er (Jansen & Hanssen, 2017).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 21 artikler om helsekompetanse og myndiggjøring. En betydelig andel handler om samarbeid (Beyene et al., 2019a, 2019b), mens det andre hovedtemaet dreier seg om pasienterfaringer (Gudde et al., 2013; Stensrud, Hoyer, et al., 2015). Flere artikler setter søkelys på aktivitetsrettede tiltak (Lovgren et al., 2020; Solli, 2015).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 3 artikler om planer og verktøy. Disse dreier seg om nettbasert behandling (Gammon et al., 2014; Trondsen et al., 2018), og brukerstyrt behandling (Rise et al., 2014).

Tjenesteutvikling

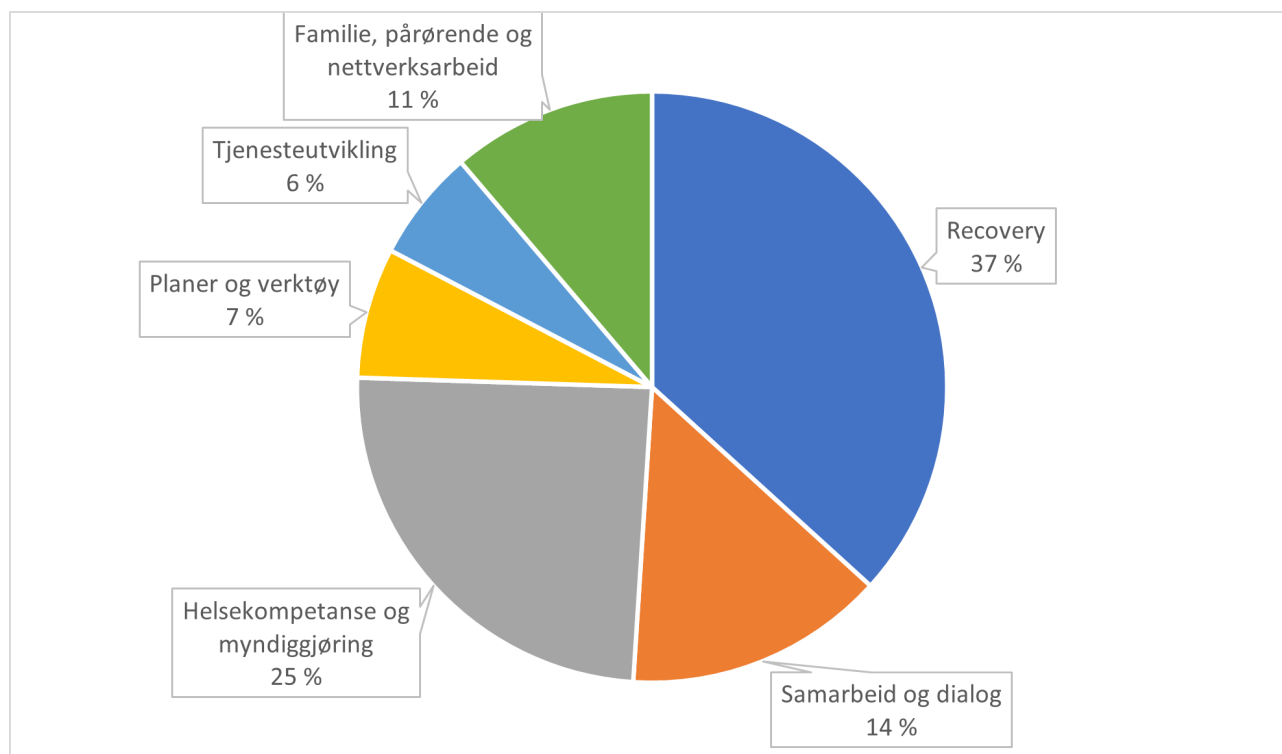

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 11 artikler om tjenesteutvikling. Manglende kontinuitet i behandling er et sentralt tema (Adnanes & Steihaug, 2016; Semb et al., 2019). En andel av artiklene setter søkelys på hva som hjelper i behandling (Biringe et al., 2016; Henriksen, 2014).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå norsk søk, engelsk språk, fant vi 19 artikler om familie, pårørende og nettverksarbeid. Hovedandelen omhandler erfaringer fra pårørende (Fylkesnes et al., 2018; Stensrud, Høyer, et al., 2015; Weimand et al., 2020), mens andre behandler pårørendeperspektivet (Anker-Hansen et al., 2019; Bjønness et al., 2022).

[For videre innsikt i artikler innenfor kategorien Individnivå – norsk søk – engelsk språk, se vedlegg 16.](#)

Funn tjeneste- og systemnivå norsk søk – engelsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 38 artikler om recovery. Et sentralt tema blant artiklene er tjenesteutøvernes utfordringer med brukermedvirkning(Kvia et al., 2021; Reed et al., 2018), et annet viktig tema er betydning av arbeid(Klevanger et al., 2018) og skole(Maelan et al., 2020). Et tredje tema er tilrettelegging av recoveryorientert praksis(Ørjasæter & Almvik, 2022).

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 17 artikler om samarbeid og dialog. Et tema er utfordringer i forhold til brukermedvirkning(Jansen et al., 2020; Markussen et al., 2021). Et annet tema er tverrfaglig og tverr-etatlig samarbeid(Moltu et al., 2017; Wormdahl et al., 2021).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 36 artikler om helsekompetanse og myndiggjøring. Hovedandelen av artiklene handler om erfaringer fra tjenesteperspektiv, eksempelvis om utfordringer med utøvelse av brukermedvirkning(Beyene et al., 2018; Vår Mathisen et al., 2016; V. Mathisen et al., 2016). Fra pasientperspektiv vektlegges det hvordan tjenestene kan fremme mer brukermedvirkning gjennom ulike tilnærminger(Solli & Rolvsjord, 2015). Samarbeid er et sentralt tema, hvor myndiggjøring utøves i fellesskap mellom tjenester og brukere(Anker-Hansen et al., 2020; Brekke et al., 2018). Ti artikler har utdanning/ forskning som tema, og vektlegger behovet for mer involvering fra brukere(Follevag & Seim, 2021; Soggiu et al., 2021).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 8 artikler om planer og verktøy. Hovedandelen av artiklene tar

opp ulike tiltak, og hvordan disse virker i praksis(Romm et al., 2019; Storm et al., 2021). En artikkel tar opp bruken av individuell plan(Holum, 2012), og samarbeid mellom ulike nivå er også et tema(Sather et al., 2018).

Tjenesteutvikling

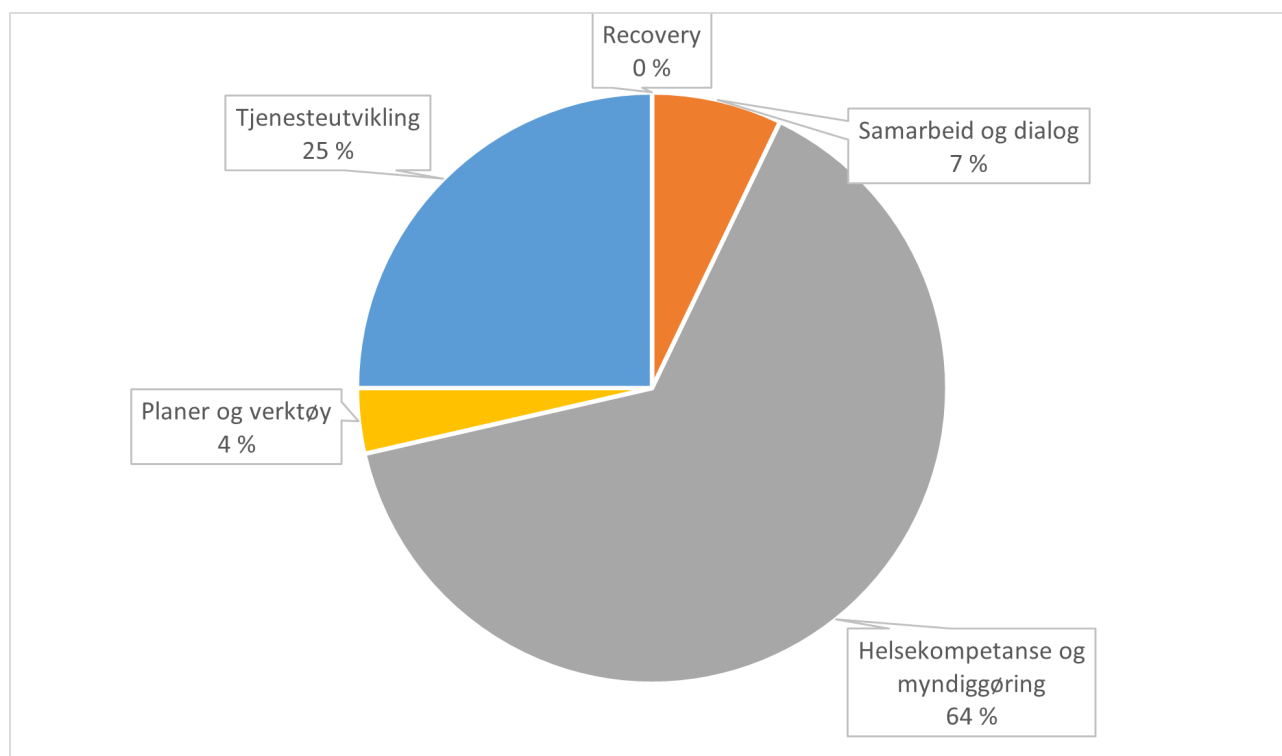

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 6 artikler om tjenesteutvikling. Artiklene i denne kategorien er konkrete på tiltak; eksempelvis nye teknologier for samarbeid(Gammon et al., 2016), selvhjelpsfilmer(Bjelland et al., 2017), ettersamtaler etter tvang(Hammervold et al., 2020) og journalføring(Myklebust et al., 2018).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå, norsk søk, engelsk språk, fant vi 12 artikler om familie, pårørende og nettverksarbeid. Hovedandelen av artikler handler om tjensteperspektiv på pårørendesamarbeid (Skundberg-Kletthagen et al., 2020; Sunde et al., 2021). Det andre fremtredende temaet er samarbeid, og hvordan dette kan utøves i praksis(Jorgensen et al., 2022).

Funn individ, tjeneste- og systemnivå samisk søk – norsk, skandinavisk og engelsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi ingen artikler om recovery.

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi 2 artikler om samarbeid og dialog. Den ene tar opp

konvensjonelle og tradisjonelle tilnæringsmåter til psykisk helse i Sápmi, hvor forfatterne understreker at aksept av de ulike praksisene kan styrke behandlingstilbudet(Kiil & Salamonsen, 2013). Den andre tar opp kulturkompetanse(Nystad et al., 2014).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi at hovedandelen av artikler setter søkelys på helsekompetanse og myndiggjøring. Fremtredende tema her er kulturelt tilpasset tilnærming til psykisk helsearbeid i Sápmi(Stoor et al., 2019; Sørly et al., 2021), og behovet for at behandling kan skje på ønsket språk(Dagsvold et al., 2015; Engnes et al., 2022).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi en artikkel om planer og verktøy(Fagerlund et al., 2022).

Tjenesteutvikling

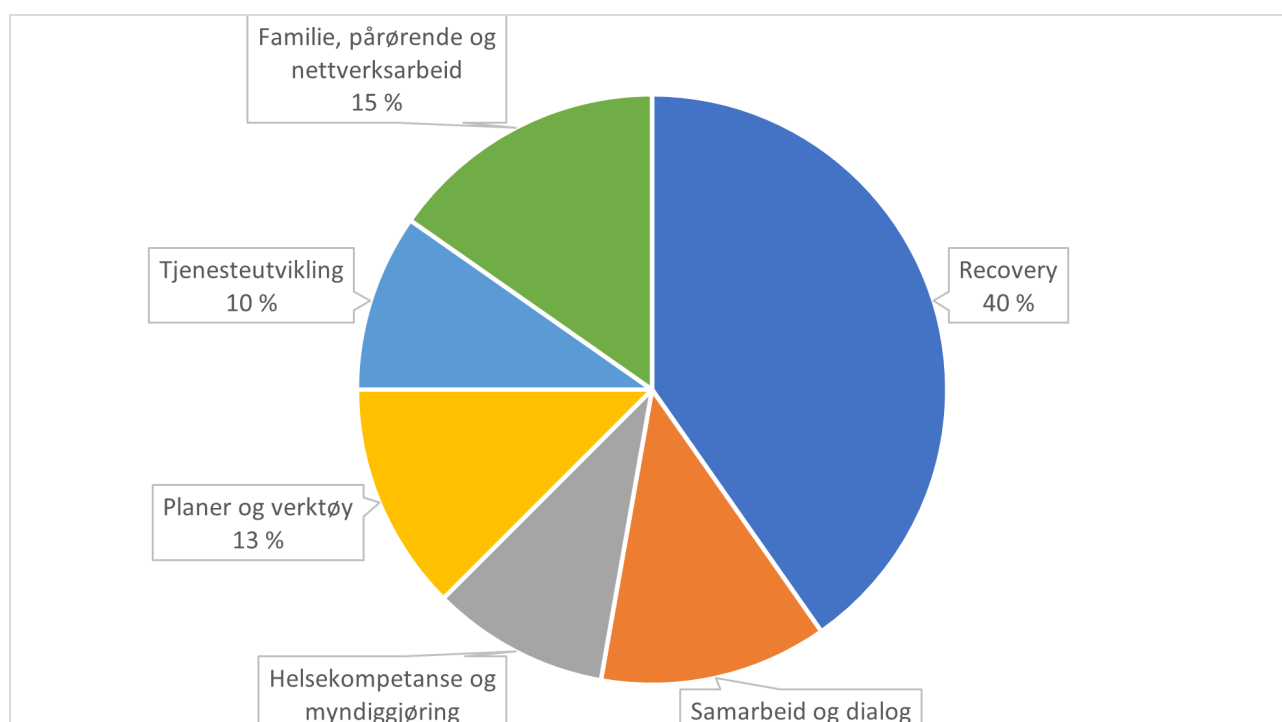

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi 7 artikler om tjenesteutvikling. Disse setter søkelys på bruk av språk og tolketjenester(Dagsvold, 2019; Dagsvold et al., 2020; Langedal & Bjørknes, 2020), samt utøvelse av kulturkompetanse(Devik & Olsen, 2020; Douglas & Saus, 2021).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 samisk søk, norsk, engelsk og skandinaviske språk, fant vi en artikkel om familie, pårørende og nettverksarbeid. Denne omhandler etterlatte etter selvmord(Silviken et al., 2014).

[For videre innsikt i artikler innenfor Samisk søk – norsk, engelsk og skandinaviske språk, se vedlegg 18.](#)

Funn individnivå – nordisk søk – skandinavisk og engelsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå nordisk søk, skandinavisk og engelsk språk, fant vi 29 artikler om recovery. Hovedandelen av artiklene omhandler hverdagsliv og meningsfulle aktiviteter(Gunnarsson & Eklund, 2017; Waxell & Wiklund Gustin, 2022) og fleksibilitet i tjenestene(Herold & Sogaard, 2019; Jensen et al., 2019). Sistnevnte inkluderer individuelt tilpassede tjenester.

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå nordisk søk, skandinavisk og engelsk språk, fant vi 10 artikler om samarbeid og dialog. Gjensidig tillit og samarbeid er et sentralt tema(Klausen et al., 2017; Selvin et al., 2016; Wallstrom et al., 2021).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå nordisk søk, skandinavisk og engelsk språk, fant vi 7 artikler om helsekompetanse og myndiggjøring. Hovedtyngden av artikler omhandler erfaringer fra pasientperspektiv (Andersson & Johnson, 2020; Fjellfeldt et al., 2016; Gerle et al., 2019). En artikkel setter søkelys på samarbeid(Jones et al., 2021).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå nordisk søk, skandinavisk og engelsk språk, fant vi 10 artikler om planer og verktøy. Halvparten av artiklene i denne kategorien handler om erfaringer knyttet til ulike tiltak(Andreasson & Skarsater, 2012; Lindstrom et al., 2020), mens den andre hovedtyngden av artikler ser nærmere på pasientenes perspektiver på hva som kan hjelpe i behandling(Kuuluvainen & Isotalus, 2015; Lindgren et al., 2015).

Tjenesteutvikling

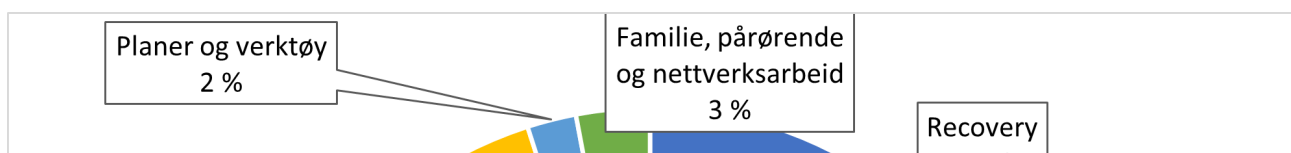

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 nordisk søk, skandinavisk og engelsk språk, fant vi 6 artikler om tjenesteutvikling. Disse omhandler konkrete tiltak, som for eksempel tilrettelegging for sansestimulering(Hedlund Lindberg et al., 2019), oppfølging innenfor rusomsorg(Jakobsen et al., 2022) og tilrettelegging av tilbud(Persson et al., 2017).

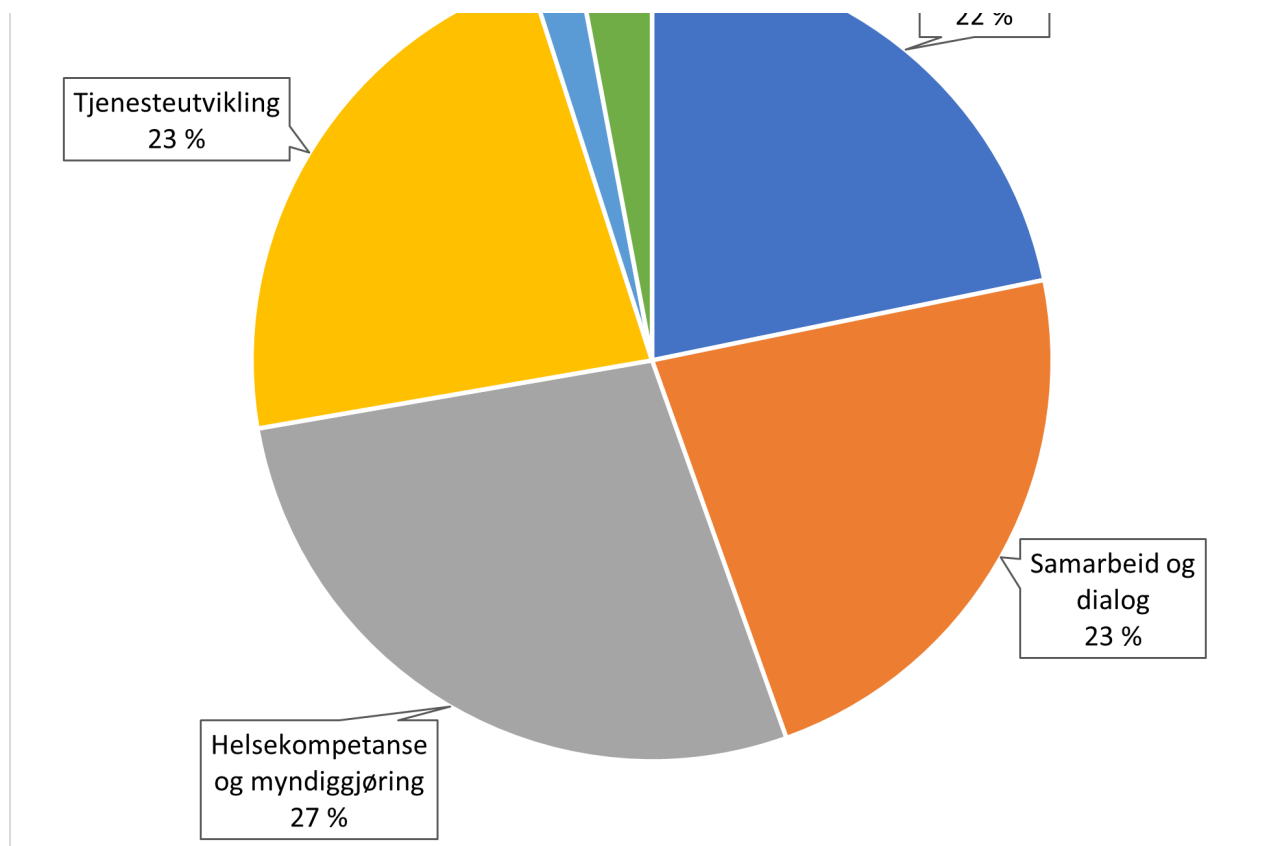

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 individnivå nordisk søk, skandinavisk og engelsk språk, fant vi 12 artikler om familie, pårørende og nettverksarbeid. Hovedsakelig dreier artiklene seg om tjenesteperspektiv på samarbeid med pårørende(Engqvist & Nilsson, 2013; Gullbra et al., 2016), og om pårørendeperspektiv(Oute Hansen & Buus, 2013) (Sellin et al., 2017).

Funn tjeneste- og systemnivå nordisk søk – skandinavisk og engelsk språk

Recovery

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 21 artikler om recovery. Artiklene handler om ivaretagelse av menneskerettigheter i praksis(Broberg et al., 2020; Oute, 2018), mangel på brukermedvirkning(Matscheck et al., 2020; Pelto-Piri et al., 2013) og utfordringer med likepersonsarbeid i praksis(Järvinen & Kessing, 2021; Wall et al., 2022).

Samarbeid og dialog

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 22 artikler om samarbeid og dialog. Artiklene omhandler anerkjennelse av erfaring hos pasienter(Jansson & Fridlund, 2016; Sjostrand et al., 2015), helhetlig tilnærminger(Graneheim et al., 2015; Hilden et al., 2021) og familie- og nettverksarbeid(Lantta et al., 2021).

Helsekompetanse og myndiggjøring

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 28 artikler om helsekompetanse og myndiggjøring. Innenfor denne kategorien er tjenesteperspektivet fremtredende, med 10 artikler som eksempelvis tar opp utfordringer med brukermedvirkning(Eivergård et al., 2016; Gabrielsson et al., 2014). Et annet sentralt tema er samarbeid(Bjerge & Nielsen, 2014; Palukka et al., 2021). Et fremtredende tema er også erfaringer knyttet til myndiggjøring(Meriluoto, 2019).

Planer og verktøy

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 2 artikler om planer og verktøy. Den ene

artikkelen retter oppmerksomheten mot kreative tilnæringsmåter som verktøy innenfor behandling(Jensen et al., 2016), mens den andre omhandler involvering i forskning, og hvordan dette kan utøves(Wulf-Andersen, 2012).

Tjenesteutvikling

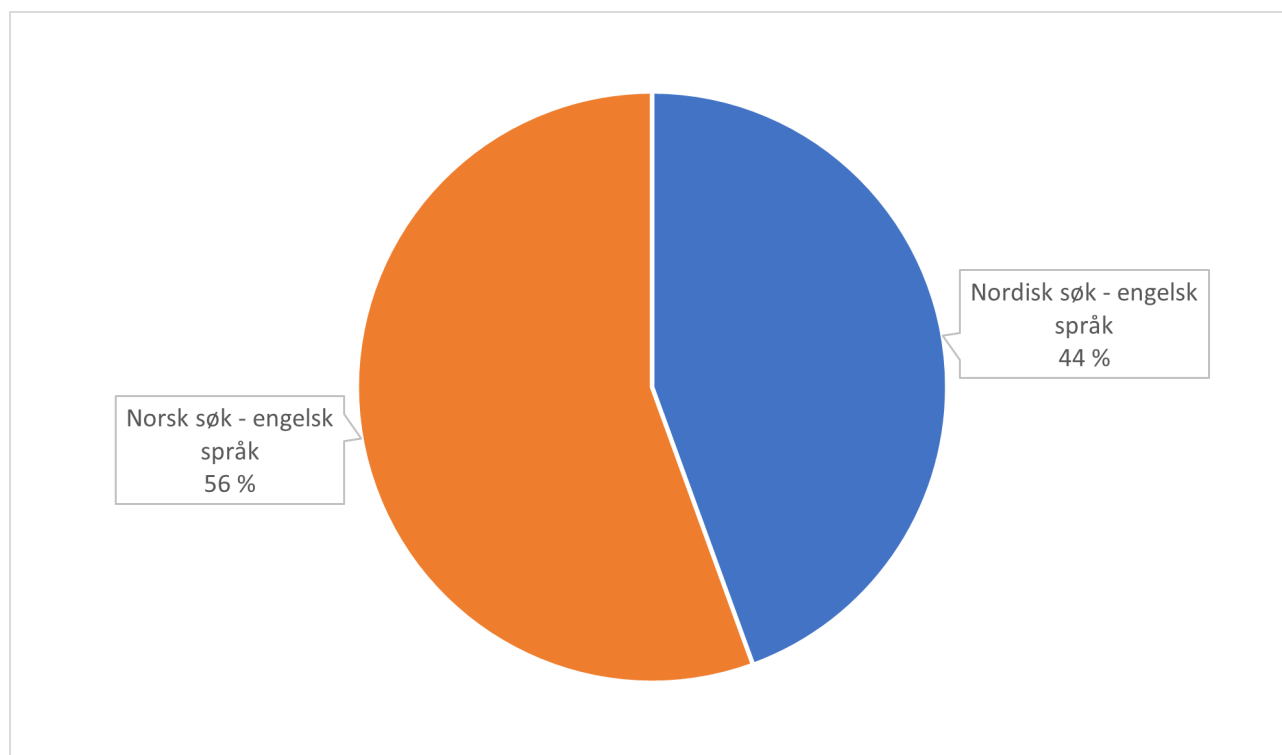

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 22 artikler om tjenesteutvikling. Et tema i artiklene er personsentrert behandling (Allerby et al., 2022; Jorgensen et al., 2020), et annet er uformell tvang(Andersson et al., 2020). Et tredje tema er aktiviteter og hverdagsliv(Hultqvist et al., 2017).

Familie, pårørende og nettverksarbeid

Innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rus i perioden 2012- 2022 tjeneste- og systemnivå nordisk søk, skandinavisk og engelsk språk, fant vi 3 artikler om familie, pårørende og nettverksarbeid. Alle tre artiklene omhandler erfaringer fra tjenesteperspektiv knyttet til samarbeid med pårørende (Hjarthag et al., 2017; Moen et al., 2021; Skundberg-Kletthagen et al., 2020).

[For videre innsikt i artikler innenfor Individnivå – nordisk søk – skandinavisk og engelsk språk, se vedlegg 20.](#)

Funn samarbeidsbasert forskning

Vi har også sortert ut de artiklene innenfor kvalitativ forskning på brukermedvirkning innen psykisk helse og rusarbeid som omhandler samarbeidsbasert forskning. Sorteringen viser at vi hadde treff på norsk og nordisk søk, engelsk språk. Det var ikke treff på samisk søk, eller norsk og skandinavisk språk. Sorteringen viser en tydeligere prioritering i forskningsfeltet på samarbeidsbasert forskning i årene fra 2012 og fremover. I en nylig svensk rapport om brukermedvirkning(Ineland, 2022) trekkes Norge frem som et foregangsland for samarbeidsbasert forskning.

Refleksjoner over hovedfunn

Problemstillingen for denne kunnskapsoppsummeringen var å se nærmere på hva som fremmer godt samarbeid om brukermedvirkning innen psykisk helse og rus. Ser vi på fordelingen av de ulike nivåene av brukermedvirkning, ser vi en tydelig tendens til et søkelys på individ- og tjenestenivå innen forskningen. Dette indikerer at forskningen i stor grad er opptatt av individuelle erfaringer av brukermedvirkning, og av praktiske tilnærminger til brukermedvirkning.

Når vi ser på funn angående livsløp, ser vi at forskning på voksne brukere utgjør hovedtyngden av funnene. Det er betydelig mindre funn på barn, unge og eldre. De voksne utgjør den dominerende gruppen innenfor kommunal- og spesialisthelsetjeneste, og det kan være naturlig at denne majoriteten av de som mottar tjenester, er lettere tilgjengelig for forskning. Det er en også en lengre tradisjon med forskning på og med voksne brukere (over 18år), og det kan være en større forskningsetisk utfordring å innlemme barn, ungdom og eldre i forskning.

Når det gjelder funnene i den første kodingsprosessen, fant vi de fremtredende temaene innenfor de ulike søkene til å være:

- Recovery
- Samarbeid og dialog
- Helsekompetanse og myndiggjøring
- Planer og verktøy
- Tjenesteutvikling
- Familie, pårørende- og nettverksarbeid

Det som ser ut til å fremme et godt samarbeid om brukermedvirkning innenfor denne analysen, er hovedsakelig knyttet til recovery - orienterte tjenester. Disse tjenestene kan sees i tilknytning til arbeid, meningsfulle aktiviteter, venner og familie, selvbestemmelse, tilhørighet, håp og identitet. Artikkene viser en bredde og kompleksitet innenfor ulike tjenestetilbud, og det er tydelig at forståelsen for mer individuelt tilpassede tjenester er voksende. Hverdagsmestring tolkes som å kunne fremme godt samarbeid om brukermedvirkning, ifølge en rekke artikler. Mye av litteraturen fokuserer fremdeles på erfaringer fra bruker- og tjenesteperspektiv. Dette kan forstås som at det er viktig å kunne arbeide erfaringsbasert med brukermedvirkning. Det å samarbeide om det brukeren synes er viktig er sentralt. Brukerinvolvering og samarbeid med pårørende og nettverk er også fremtredende i forskningen.

Kunnskapshull

Rapporten med tilhørende vedlegg sier noe om strømninger innen kvalitativ forskning på brukermedvirkning i psykisk helse- og rusfeltet de siste ti årene. Rapporten med vedlegg er ikke utfyllende, men kan sees på som et grunnlag for videre arbeid. Ved hjelp av de ulike vedleggene kan vi identifisere kunnskapshull, definere behov for ytterligere satsning og oppmerksomhet rundt særlige målgrupper, tiltak og samarbeidsbehov. Vedleggene kan også være et utgangspunkt for nye, systematiske oversikter av mer begrenset omfang. De kan også fungere som ressurser for eksempelvis brukerorganisasjoner, profesjonsorganisasjoner, utdanning, praktikere eller forskere som ønsker en oversikt over kvalitativ forskning på temaet innenfor den gitte perioden.

Vi har identifisert en rekke kunnskapshull i arbeidet med denne litteraturgjennomgangen.

Det er mest forskning på individ og tjenestenivå, innenfor alle inkluderte artikler. Forskningen på systemnivå er betydelig mindre, innenfor norsk, samisk og nordisk kontekst. For at brukervedvirkning skal forankres i praksis, tiltak og tjenester, er det sentralt å fokusere ytterligere på systemnivå. Dette gjelder også forskning på hvordan bruker- og pårørendevirkning kan utøves innenfor helseforvaltningen.

Når det gjelder ulike aldersgrupper, er det et stort behov for flere studier som omhandler barn og unge. Det er særlig mangelfull forskning på og med barn som omhandler brukervedvirkning. De få studiene som finnes, er innenfor en sosialfaglig og barnevernsfaglig kontekst. Her ser vi behovet for en tydelig satsning på mer forskning på og med barn og unge, både innenfor helse- og sosialfag.

Det er også et stort kunnskapshull på studier som omhandler brukervedvirkning for eldre innen psykisk helse- og rusarbeid. Dette gjelder innenfor samtlige søk, og bør også prioriteres innen fremtidig forskning på feltet.

Forskningen som omhandler familie- og pårørende beskriver i stor grad erfaringer med denne målgruppen, fra et tjenesteperspektiv. Det er et behov for mer forskning på familie- og pårørendes egne perspektiver, og gjerne i form av mer samarbeidsbasert forskning. Dette gjelder alle aldersgrupper av pårørende.

Det er mer forskning innen psykisk helse, og færre prosjekter på det som omhandler rus. Dette indikerer behov for større oppmerksomhet på rusfeltet. Vi ser også behovet for flere studier på det som omhandler kommunale tjenester og brukervedvirkning.

Det er også behov for mange flere studier innenfor en samisk kontekst, som både kan sette søkelys på individ-, tjeneste- og systemnivå. Dette behovet gjelder alle aldersgrupper.

Implikasjoner for praksis og forskning

Denne kunnskapsoppsummeringen viser frem forskning rundt nødvendigheten av samarbeid med pasienter og pårørende, og tjenester, for å få til individuelt tilpasset behandling og for å fremme brukervedvirkning i praksis. Videre er det sentralt å bestrebe gode overganger mellom tjenester, for å få til mer helhetlige tilnærminger. Forskningen viser videre betydningen av meningsfulle aktiviteter for den enkelte. Brukervedvirkning krever kreativitet og vilje til samarbeid, det er ingen enkel fasit på hvordan dette skal utøves. Artiklene i denne oppsummeringen viser at det er mye innsatsvilje i tjenestene, og spennende tiltak som er under utprøving. Gode evalueringsrutiner i tjenestene vil kunne medføre mer dynamisk tilpassede og brukervennlige tilnærminger.

Det er særlig viktig å være oppmerksom på ivaretagelse av barn, unge og eldre sine rettigheter i forhold til brukervedvirkning.

Konklusjon

Utgangspunktet for denne kunnskapsoppsummeringen har vært å se nærmere på hva som fremmer et godt samarbeid om brukermedvirkning i fagfeltet, ifølge nordisk og samisk kvalitativ forskning de siste ti årene. Ved hjelp av en litteraturgjennomgang på området, mener vi å ha funnet en rekke kunnskapshull. Vi finner den manglende forskningen på barn og eldre som et imperativ for satsningsområder fremover.

Det er et håp om at denne kunnskapsoppsummeringen vil bidra til en styrket interesse og satsning, både innen forskning og praksis, for å fortsette arbeidet med brukermedvirkning innen psykisk helse- og rusarbeid.

Antall treff: 6

Kommentar: Fra januar 2020 har ikke lenger databasen blitt oppdatert med nytt materiale. Det nyeste fra basen er derfor fra 2019.

Pga. tekniske utfordringer, måtte "Diagnosis, Dual (Psychiatry)" søkes separat.
